Claims

What is claimed is:

Sub PT

An interactive amusement device comprising:

- (a) a body;
- (b) a transport element moveably connected to the body;
- (c) a motor associated with the body, the motor operably coupled to the transport element;
 - (d) a microprocessor operably coupled to the motor;
 - (e) a data reader-writer operably coupled to the microprocessor.
- 2. The interactive amusement device of claim 1 wherein the data reader-writer receives data from a data storage device.
- 3. The interactive amusement device of claim 2 wherein the data comprises enhancement data adapted to enhance a function of the device.
- 4. The interactive amusement device of claim 2 wherein the data storage device is a card.
- 5. The interactive amusement device of claim 1 further comprising at least two limbs moveably connected to the body, wherein the motor is operably coupled to the at least two limbs.
- 6. The interactive amusement device of claim 1, further comprising a wireless receiver operably coupled to the microprocessor.
- 7. The interactive amusement device of claim 6, further comprising a remote wireless transmitter operably coupled by wireless communication with the wireless receiver.
- 8. The interactive amusement device of claim 1, further comprising a unit wireless transmitter associated with the body, the unit wireless transmitter capable of wireless communication with a second interactive amusement device.

Wo orsteod

- 9. The interactive amusement device of claim 1 wherein the transport element comprises at least two wheels.
- 10. The interactive amusement device of claim 1 wherein the transport element comprises at least two legs.

11. The interactive amusement device of claim 2 wherein the data reader-writer writes data to the data storage device.

12. An amusement device comprising:

a body;

features carried by the body;

means for powering the device and at least some of the features, said means for powering carried by the body;

means for communicating information to the device comprising:

means for holding information, said means for holding discrete from the device, and means for receiving information, said means for receiving carried by the body; and

a microprocessor operably coupled to the means for powering and means for receiving.

- 13. An interactive amusement device comprising:
 - (a) a body;
 - (b) a transport element moveably connected to the body;
- (c) a motor associated with the body, the motor operably coupled to the transport element;
 - (d) a microprocessor operably coupled to the motor;
 - (e) a data reader-writer operably coupled to the microprocessor;

- a wireless receiver operably coupled to the microprocessor; (f)
- a unit wireless transmitter associated with the body, the unit wireless transmitter (g) capable of wireless communication with a second interactive amusement device; and
- a remote wireless transmitter operably coupled by wireless communication with (h) the wireless receiver.
- The interactive amusement device of claim 13 wherein the data reader-writer receives 14. data from a data storage device.
- The interactive amusement device of claim 14 wherein the data comprises enhancement 15. data adapted to enhance a function of the device.
- The interactive amusement device of claim 14 wherein the data storage device is a card.
- 17. The interactive amusement device of claim 13 further comprising at least two limbs moveably connected to the body, wherein the motor is operably coupled to the at least two limbs.
- 18. The interactive amusement device of claim 13 wherein the transport element comprises at least two wheels.
- 19. The interactive amusement device of claim 13 wherein the transport element comprises at least two legs.
- The interactive amusement device of claim 13 wherein the data reader-writer writes data 20. to the data storage device.
- An interactive amusement system comprising: Sub A57

(a) a body;

l-5

n

- at least two transport elements moveably connected to the body; (b)
- at least two arms moveably connected to the body; (c)

29

- (d) a motor associated with the body, the motor operably coupled to the at least two transport elements and the at least two arms;
- (e) a data reader-writer associated with the body, the data reader-writer adapted to receive data from a data storage device; and
- (f) a microprocessor operably coupled to the motor, the microprocessor being adapted to receive data from the data reader-writer and command the motor to perform an action.
- 22. The interactive amusement device of claim 21 wherein the data comprises enhancement data.
- 23. The interactive amusement device of claim 22 wherein the enhancement data enhances a function of the device.
- 24. The interactive amusement device of claim 22 wherein the enhancement data increases the mobility of the device.
- 25. The interactive amusement device of claim 22 wherein the enhancement data increases the speed of the device.
- 26. The interactive amusement device of claim 22 wherein the enhancement data allows the device to perform an additional function.
- 27. The interactive amusement device of claim 26 wherein the additional function comprises a punching motion performed by the at least two arms.
- 28. The interactive amusement device of claim 21 wherein the data storage device is a card.
- 29. The interactive amusement device of claim 28 wherein the card is adapted to resemble a playing card.
- 30. The interactive amusement device of claim 21 wherein the at least two transport elements are at least two wheels.

- 31. The interactive amusement device of claim 21 wherein the at least two transport elements are at least two legs.
- 32. The interactive amusement device of claim 21 wherein the data reader-writer writes data to the data storage device.
- 33. An interactive amusement system comprising:
 - (a) a body;
 - (b) at least two transport elements moveably connected to the body;
 - (c) at least two arms moveably connected to the body;
- (d) a motor associated with the body, the motor operably coupled to the at least two transport elements;
- (e) a microprocessor operably coupled to the motor, the microprocessor being adapted to command the motor to perform an action;
- (f) a data reader-writer associated with the body, the data reader-writer adapted to receive enhancement data from a data storage device and transmit the enhancement data to the microprocessor, wherein the enhancement data enhances a function of the device;
- (g) a wireless receiver associated with the body, the wireless receiver adapted to receive a wireless communication and transmit the wireless communication to the microprocessor;
- (h) a unit wireless transmitter associated with the body, the unit wireless transmitter operably coupled with the microprocessor and capable of wireless communication with a second interactive amusement device; and
- (i) a remote wireless transmitter operably coupled by wireless communication with the wireless receiver.

- The interactive amusement device of claim 34 wherein the enhancement data increases the mobility of the device.
 - 35. The interactive amusement device of claim 34 wherein the enhancement data increases the speed of the device.
 - 36. The interactive amusement device of claim 34 wherein the enhancement data allows the device to perform an additional function.
 - 37. The interactive amusement device of claim 36 wherein the additional function comprises a punching motion performed by the at least two arms.
 - 38. The interactive amusement device of claim 33 wherein the data storage device is a card.
 - 39. The interactive amusement device of claim 38 wherein the card is adapted to resemble a playing card.
 - 40. The interactive amusement device of claim 33 wherein the at least two transport elements are at least two wheels.
 - 41. The interactive amusement device of claim 33 wherein the at least two transport elements are at least two legs.
 - 42. The interactive amusement device of claim 33 wherein the data reader-writer writes data to the data storage device.
 - 43. An interactive amusement system comprising:
 - (a) a body;
 - (b) at least two transport elements moveably connected to the body, wherein the at least two transport elements are selected from the group consisting of
 - (1) at least two wheels, and
 - (2) at least two legs;

- (c) at least two arms moveably connected to the body;
- (d) a motor associated with the body, the motor operably coupled to the at least two transport elements;
 - (e) a microprocessor operably coupled to the motor, the microprocessor being adapted to command the motor to perform an action;
- (f) a data card reader associated with the body, the data card reader adapted to receive enhancement data from a data card and transmit the enhancement data to the microprocessor, wherein the enhancement data provides an enhanced function, the enhanced function being selected from the group consisting of:
 - (1) increased mobility,
 - (2) increased speed, and
 - (3) performance of an additional function;
- (g) a wireless receiver associated with the body, the wireless receiver adapted to receive a wireless communication and transmit the wireless communication to the microprocessor;
- (h) a unit wireless transmitter associated with the body, the unit wireless transmitter operably coupled with the microprocessor and capable of wireless communication with a second interactive amusement device; and
 - (i) a remote wireless transmitter operably coupled by wireless communication with the wireless receiver.
